

# METHOD FOR DETECTING AND IDENTIFYING SHORTED THYRISTORS

## Abstract of the Disclosure

A method is provided for determining a shorted thyristor cell in a bridge that supplies a load from a source, the bridge including a plurality of the thyristor cells. The method includes the step of sequentially gating each of the cells to a conducting state, so that only one cell is gated at one time; providing at least one current transformer in the bridge; generating a current flow that passes through the bridge including the one cell that is gated; observing current in the at least one current transformer to determine a short in one of the cells that is not gated; and determining a shorted cell based on the step of observing current in the at least one current transformer.
